Paper -> Live written go checklist

Use at the ~2026-11-28 paper review (or earlier if evidence is clear). Nothing auto-deposits. Live RH requires your written go after the checks below.

A. Daily Mac readiness (before each paper week)

- [ ] Repo on cursor/post-pdt-strategy-refresh-cd1d (or main after merge)
- [ ] ./scripts/doctor_paper_ready_mac.sh -- no FAIL items
- [ ] Dashboard LaunchAgent loaded -> http://127.0.0.1:8080 opens
- [ ] Paper worker LaunchAgent loaded (com.investment-agent.paper-worker)
- [ ] Mac awake through the cash session (or sleep settings allow KeepAlive)
- [ ] .env has NOTIFY_* + working SMTP_* (health + PAPER buy/sell emails)
- [ ] Smoke: ./scripts/run_morning_health_mac.sh --force-notify reaches inbox
- [ ] STOP PROCESS tested once: Stop -> no new paper arms -> Resume -> arms resume

---

B. Paper pass criteria (section 5.2) -- all required

Primary book = gate_approved. Also review all_signals for comparison.

#	Criterion	Pass?	Evidence
1	>= 30 filled paper trades (prefer trade-through)	____	Scoreboard / session log
2	Positive expectancy after fees on gate book	____	Scoreboard / export
3	Gate book beats random-pick control (same fees)	____	run_random_pick_control.py
4	Max drawdown on $5k paper book <= 10% ($500)	____	Risk / equity high-water
5	Ops clean: <=5 sessions/week; T+1 settled modeled	____	Day-trade log / skips

Fail -> do not deposit live $5k. Fix tooling or extend paper; do not hope live is different.

C. Written go for live Deposit #1 (RH CASH $5,000)

Earliest sketch: 2026-12-01. Still requires section B = pass.

- [ ] Section B all checked Pass
- [ ] Dual-arm review done (gate vs all-signals) -- gate remains primary
- [ ] STOP PROCESS re-tested after any code pull
- [ ] RH account type confirmed: CASH / unlevered (no borrow)
- [ ] Hard stop rule accepted: -10% ($500) -> pause new arms + written review
- [ ] SMTP paper trade emails off when live (NOTIFY_PAPER_TRADES=0) -- use RH app for fills
- [ ] RH API/MCP creds provided and dry-run sync OK

Operator statement (fill in):

I reviewed the paper evidence on _____ (date). Gate book meets section 5.2.

I authorize live Deposit #1 of $5,000 CASH on/after _____.

Signature / initials: _____

D. Later deposits (#2-#4) -- not automatic

Cadence sketch: +$5k ~every 30 sessions (2027-01-13 / 02-25 / 04-09). Each tranche needs:

- [ ] ~30 sessions since prior deposit (or explicit waiver)
- [ ] Live expectancy still positive after costs
- [ ] No unresolved hard-stop breach
- [ ] RH <-> dashboard reconcile clean
- [ ] New written go for that tranche

E. Robinhood paper trading note (Oct 2026)

Robinhood does not offer a stock paper / demo brokerage account. Closest tool: Simulated Returns -- options scenario analysis only, not virtual cash or stock fills.

Worth building RH paper into this plan? No.

Keep internal paper ledger + Yahoo 5m bars through Nov. After written go, prove fills with small real CASH under the -10% hard stop.
